

Aspen Vista™ CTO and Vista CTO4

Designed to provide motion restriction throughout the cervico-thoracic spine, the Vista CTO and Vista CTO4 provide significant motion control in all three planes of motion—flexion/extension, lateral bending and axial rotation.¹ These one size adjustable braces feature multiple adjustment points to help ensure a comfortable fit and the ability to step down to support patient recovery.

Award-Winning Cervical Care

The unique and innovative design of the Vista CTO earned the prestigious *SPINE TECHNOLOGY AWARD* for Best New Technology in Cervical Care. Aspen is proud to have won this award and to be the cervical orthosis of choice in the majority of Trauma Centers across North America, working together to provide superior patient care and improved outcomes.

Aspen Acute Restriction Braces Provide a Controlled Environment for Healing

Aspen Acute Restriction braces provide significant motion restriction by acting as a kinematic restrictor², for patients needing support for healing, and can be safely and quickly applied. Gross motion restriction is often desired in treating injured patients recovering from trauma or surgery³. The goal is to support healing⁴, limit recovery time and save money by expediting patient discharge times, accelerating turnaround times and minimizing health risks.

Locking Sternal Adjustment
Angle of support strut is easily adjusted to fit a patient's anatomy then locks into place.

Padded for Comfort

Fully padded at all patient contact points to help maximize comfort, encouraging improved patient compliance.

Flexible Thoracic Adjustment
One size fits essentially all patient anatomies and unlocks to adjust during original fit and repositioning.

VISTA CTO4

VISTA CTO

VISTA MULTIPOST COLLAR

The Vista CTO4
For enhanced motion restriction, the Vista CTO4 provides increased motion control in all three planes of motion.⁵ The adjustable, low-profile back strut is designed for maximum patient comfort, even in the supine position.

Easily Steps Down to Support Progression of Care

As a patient's condition improves, the Vista CTO4 can be stepped down to the Vista CTO then down again to the Vista MultiPost Collar, all without the use of tools.
