

 **rebleSS**

At-home robotic rehabilitation

 **ALVICA**

Robotic Rehabilitation Device

rebleSS is a **4in1 FDA-registered** robotic therapy device for both **upper** and **lower** extremities, providing motion to the elbow, wrist, ankle, and knee joints. With **multiple operating modes**, rebleSS allows for passive, active-assisted, and resisted exercise and **range of motion measurements**.

Features

Diverse Treatment Modes

Assist-as-Needed technology and Continuous Passive Motion (CPM) allows patients to change exercising modes depending on the patients' abilities

Multi-Joint Application

A single device for wrist, elbow, ankle, and knee.

Improve Patient Compliance

The rebleSS therapy device provides patients with access to therapy from the comfort of their home. And, with to view activity and progress, the rebleSS app increases patient's motivation and commitment.

Tele-Rehab Platform

Seamlessly review treatment data and communicate with patients for a more efficient rehabilitation management.

Increase Efficiency in Your Clinic

With the rebleSS clinic app, providers can view data and provide consultations from anywhere. Telemedicine visits are scheduled and performed with patients through the click of a button.

Wide Rehabilitation Scope

Applicable for treating neurological and musculoskeletal movement disorders.
