

PATELLA BRACING

In Partnership with

ABOUT JOINT OPERATIONS

Founded in January 2015, Joint Operations was set up to bridge suppliers of innovative healthcare technologies and clinical teams working within Joint Preservation and Extremities.

Joint Operations are a socially responsible company and donate 10% of profits to a UK foundation supporting various projects to preserve the environment.

Joint Operations and Breg have partnered since 2020 to bring a new era of bracing to the UK. A unique combination therapy approach brings together a natural synergy between operative and non-operative products.

PATELLOFEMORAL BRACING

LATERAL STABILISER Brace

The Lateral Stabiliser offers a strong tubular, lateral buttress that is for lateral stabilisation of the patella and is commonly used by patients with patellofemoral conditions.

Common Examples of Use

- Lateral patella subluxation
- Chronic patellar maltracking
- Mild chondromalacia

Product Features

Low profile design allows for improved patient compliance
J-shaped buttress provides lateral patellar stabilisation
Inferior and superior straps provide additional compression

PTO Brace

The PTO is designed to align the knee for patients with maltracking or patella tracking conditions. The PTO adjusts the amount of compression applied from the lateral pressure plate by forming a soft tissue wall that controls patellar subluxation.

Common Examples of Use

- Mild chondromalacia
- Patella subluxation
- Patella dislocation
- Patella tendonitis
- Chronic patellar maltracking
- Patellofemoral pain syndrome
- Post lateral release
- Post patellar realignment

Product Features

Open back or closed back options available
Dynamic Function or normal gait

TENDON COMPRESSION Strap

The Patella Tendon Compression Strap provides light support to patients with patellar tendonitis.

Sizes: XS, S, M, L, XL

20.50 PATELLOFEMORAL Brace

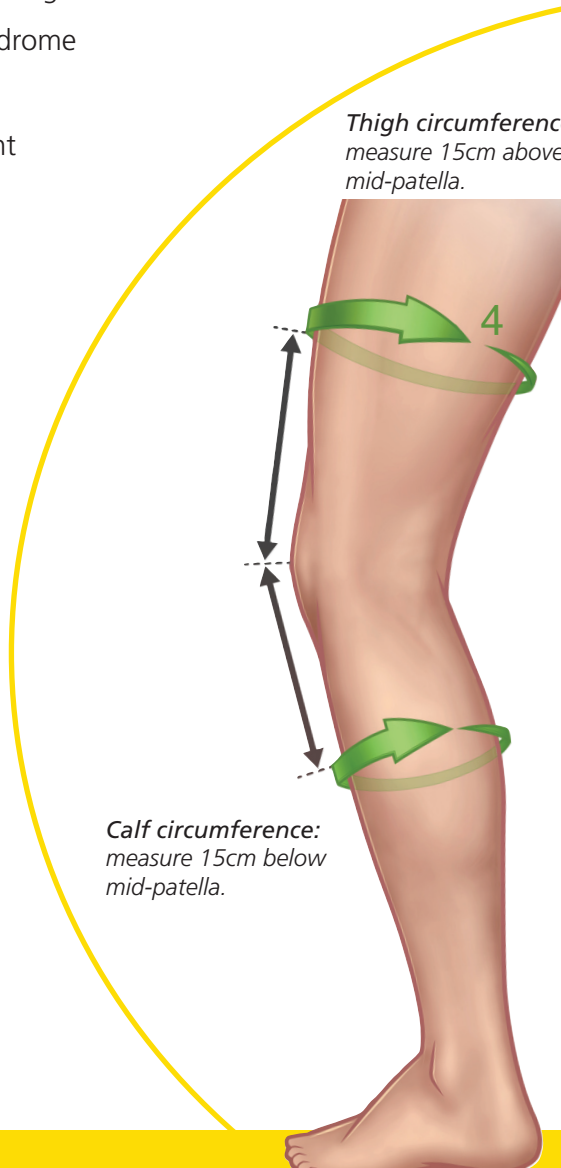

Between 20° and 50° of flexion, the patella is at risk to abnormal tracking, subluxation, and dislocation. The 20.50 Patellofemoral Brace dynamically supports the patella through this range of flexion by increasing pressure of the bladder and underlying buttress against the lateral border of the patella as the knee moves between 20° and 50°.

Common Examples of Use

- Patellofemoral pain syndrome
- Patellar maltracking
- Patellar tendonitis
- Mild chondromalacia
- Runner's Knee
- Post lateral release

Product Features

Dynamic design applies increased lateral pressure between 20° and 50° of knee flexion
Pneumatic air bladder
Pneumatic patellar pad allows patients to adjust for their desired level of support
Pivoting straps aid in preventing brace migration
Quick-release buckles

IN PARTNERSHIP WITH

ABOUT BREG

Breg provides easy to use products to improve the experience of the orthopaedic episode, from conservative treatment to pre-and post-surgery. Breg helps to simplify orthopaedic patient care by delivering high quality products and comprehensive partnerships.

Founded in 1989 as a sports medicine company specialising in bracing and cold therapy, Breg built its reputation on customer care. The company's ultimate goal is to create remarkably easy solutions that give valuable time back to providers and patients alike to focus on what's most important.
