

Driving uncompromised knee balance for TKA

OMNIBotics®

Soft tissue balance for total knee arthroplasty is important in providing quality patient outcomes, but there hasn't been a reproducible way to drive balance without some sacrifice. **Until now.**

The OMNIBotics Predictive Balance™ technique is able to consistently predict post-operative knee balance through proper implant placement, prior to any bony resections.

This breakthrough procedure is changing the way TKA's are balanced, proven by the clinical results:

97%

Patient satisfaction

90%

Knees Balanced
within 2mm through
full ROM

50%

Reduction in soft
tissue release rate
