

Virtual Clinics

HEALTH CARE

Who is Amplitude?

Amplitude is a well-established leader in the supply of digital solutions for clinical outcomes and Patient Recorded Outcomes Measurements (PROMs) collection using our remote patient portal.

What do we do?

Our platform allows the tracking and monitoring of a patients' progress remotely, removing onerous administration and providing a clear view of a patients' clinical status that can be used to support prioritisation and treatment decisions.

Patients record their clinical status using validated and structured questionnaires and PROMs specific to their condition or problem. Clinicians and healthcare professionals are able to quickly and easily review that data, supplement it where necessary (to ensure proper clinical context is recorded) and record treatment and treatment plan.

How does it work?

Step 1 - Patient is either added to Amplitude or Self-Registers and allocated to a pathway, which automatically triggers relevant questionnaires and scores for that condition or problem, specific to the specialty.

Step 2 - If a screening questionnaire is used in conjunction with the PROMs, the patient is automatically categorised into one of 5 groups for clinic booking, which enables admin staff to quickly and highly efficiently, manage those patient bookings.

Step 3 - When in clinic (virtual or face-to-face) the clinician is able to review patient scores and questionnaire responses for each patient attending the clinic, thereby providing structured and clinically validated information to support decisions on treatment, which can be especially useful when running virtual appointments, where visual cues are not an option.

To ensure patients are reviewed again in the future, clinicians can set a reminder for this patient at the interval they wish to pick this up again.

What does it mean for you?

The result is representative, accurate and meaningful data that paints a clear picture of each patient's health. The data you collect will allow you to track your patients and provide them the reassurance that their health and recovery is being monitored, whilst ensuring service delivery, in difficult circumstances, such as those imposed by Covid-19.

Clinics are organised by clinical priority as opposed to length of wait or other methods of booking. Fewer clinic appointments are missed and admin is reduced across the clinic.
